DETAILED ACTION

This application is a continuation of 09/376,184, filed August 17, 1999, now abandoned, which is a continuation of 08/987,867, filed December 9, 1997, now patent number 6,063,384, which is a continuation of 08/389,459, filed February 15, 1995, now patent number 5,817,512, which is a continuation of 08/087,009, filed July 1, 1993, now abandoned.

Applicants amendment filed August 26, 2002, paper number 10, has been received and entered. Claims 1-34 and 40-44 have been canceled. Claims 35, 38, 29 and 45 have been amended. Claims 46-63 have been added. Claims 35-39 and 45-63 are pending and currently under examination.

Election/Restriction

Applicant's election without traverse of Group IV, drawn to a method of stimulating the immune response system of a subject, in Paper No. 11 is acknowledged. However, the amendment filed on August 26, 2002 canceling the claims drawn to the elected invention and presenting only claims drawn to a non-elected invention is non-responsive (MPEP § 821.03). The pending claims are not readable on the elected invention because they have been amended from expressing an immunogenic protein to expressing other types of proteins. Previously, the claims were drawn to expressing and stimulating an immune response to immunogenic proteins or fragments thereof, in particular dependent claims set forth several viral proteins of HIV-1.

Art Unit: 1632

Presently, the claims have been amended to encompass general methods of delivery and dependent claims are now drawn to expressing biologically active proteins such as interleukin, cytokines and other factors and biologically active molecules including antisense sequences and ribozymes. The presently pending claims are drawn to gene therapy methodology encompassing the expression of completely different proteins than previously encompassed by the previous claims, requiring a different and separate search. Stimulating an immune response affectively only requires adequate expression of a given antigen, wherein the present claims encompass biologically active molecules with biological affects on the subject, requiring a separate search of each of the molecules in their respective and relative art, and further consideration of each of the effects upon delivery. Additionally, if the present claims were presented, they would be further restricted into methods directed to each of the different types of biologically active molecules expressed, *i.e.* cytokine, ribozyme, antisense.

If the previous claims and the presently pending claims were presented together they would be found to be unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). The separate methods require different polynucleotide sequences, and the expression of the polynucleotides results in physiologically different effects in the subject. The search required for methods of generating an immune response by expressing an antigen is different than that required for gene therapy methods for delivering biologically active molecules.

Art Unit: 1632

Because these inventions are distinct for the reasons given above have acquired a separate status in the art as shown by their different classification and divergent subject matter restriction for examination purposes as indicated is proper.

Since the above-mentioned amendment appears to be a bona fide attempt to reply, applicant is given a TIME PERIOD of ONE (1) MONTH or THIRTY (30) DAYS, whichever is longer, from the mailing date of this notice within which to supply the omission or correction in order to avoid abandonment. EXTENSIONS OF THIS TIME PERIOD UNDER 37 CFR 1.136(a) ARE AVAILABLE.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
